

**Water Quality Section:** Shawn Giblin – There were around 90 participants for the virtual water quality technical section meeting. Discussed emerging contaminants, PFAS, Chloride, and nitrogen. A few years ago the technical section made these a priority and will focus on these issues. Shawn mentioned that the UMRCC should engage in some educational efforts regarding the rising chloride issue. Emerging contaminants need more sampling. It seems like new pesticides are being used every ten years. Shawn mentioned that the UMRCC could start tracking these pesticides. Rob Burdis will be the new chair and Shawn will work him on bringing him up to speed on what the technical section has been working on.

**Funding request** – No funding was requested.
